

MonoBehaviour

```
classDiagram
    class MonoBehaviour
    class TMPro_Examples_WarpTextExample["TMPro.Examples.WarpTextExample"]
    TMPro_Examples_WarpTextExample --|> MonoBehaviour
```

The diagram shows a class hierarchy. At the top is a box for 'MonoBehaviour' with two empty slots below it. Below it is a box for 'TMPro.Examples.WarpTextExample' which is shaded grey. This box contains a list of four public fields: '+ VertexCurve', '+ AngleMultiplier', '+ SpeedMultiplier', and '+ CurveScale'. A blue arrow with an open triangle head points from the top of the 'TMPro.Examples.WarpTextExample' box to the bottom of the 'MonoBehaviour' box, indicating that 'TMPro.Examples.WarpTextExample' inherits from 'MonoBehaviour'.

TMPro.Examples.WarpTextExample

- + VertexCurve
- + AngleMultiplier
- + SpeedMultiplier
- + CurveScale
