

MonoBehaviour

```
classDiagram
    class MonoBehaviour
    class TmpPro_Examples_ObjectSpin["TmpPro.Examples.ObjectSpin"]
    TmpPro_Examples_ObjectSpin --|> MonoBehaviour
```

The diagram shows a class hierarchy. At the top is a box for 'MonoBehaviour' with two empty compartments below the name. Below it is a box for 'TmpPro.Examples.ObjectSpin' which is shaded grey. This box has a top compartment with the name, a middle compartment with three public attributes: '+ SpinSpeed', '+ RotationRange', and '+ Motion', and a bottom empty compartment. A blue arrow with an open triangular head points from the top of the 'TmpPro.Examples.ObjectSpin' box to the bottom of the 'MonoBehaviour' box, indicating inheritance.

TmpPro.Examples.ObjectSpin

+ SpinSpeed
+ RotationRange
+ Motion
